Dear Hiring Manager,

am excited to apply for the Software Developer position at Stripe. As a student pursuing a Bachelor's degree in Information Technology, I am confident that my skills and experience make me a strong candidate for this role.

I have experience working on cross-functional projects and collaborating with other engineers to develop high-quality software. As a Front-end Developer Intern at Innotek IT Systems, I led a team in creating the frontend of a project using HTML, CSS, and JavaScript. Additionally, I have experience in full-stack web development, developing web applications using React, Node.js, and Express, and working with databases like MySQL and MongoDB. I have also worked collaboratively on multi-person coding projects in both a university and professional setting.

In terms of programming languages, I have experience in Java, JavaScript, and C++. I am confident that I can learn new programming languages quickly, as I have already demonstrated my ability to independently research unfamiliar systems and technologies, allowing me to form a deep understanding of those systems.

I am excited to work on projects that allow me to give meaningful feedback on code reviews and technical designs, and I have already demonstrated my project management and technical leadership skills while working as a freelancer. I have developed full-stack web applications for commercial use, from designing to implementing, and ensured that the systems I operated continued running well and could scale to meet the needs of users.

I am confident that my skills and experience align with the requirements for this position. I am eager to learn and grow as a software developer, and I believe that [company] would be an excellent place for me to do so.

Thank you for considering my application. I look forward to the opportunity to further discuss how I can contribute to Stripe.

Sincerely,
Aditya Patil

Aditya Patil
